ELITE™ FOR EMS

ImageTrend Elite™ does what no other solution can for EMS agencies. It has everything you expect and more to document patient care in a single solution.

Reporting for Your EMS Data

Choose from standard or configure ad-hoc reports for your NEMSIS v3 data with the built-in ImageTrend Report Writer™.

Fluid, Configurable Forms

Create forms to optimize your department's workflow using Elite's Form Manager. Use Supplemental Questions to augment state or national datasets. Choose fields and order of display and configure Event Visibility Rules for quick and accurate data entry.

Patient-Centric Timeline™ View

View patient information across time or multiple encounters at a glance. Selecting an event brings the user right to that data. For repeat patients, historical EKG images can be referenced to compare to current readings.

Save Time with the Library

User-generated content from your peers in other departments can be shared with the Library. Find forms that others have found successful and share the wealth of knowledge in the ImageTrend community.

Centralized Data Collection Settings

Take in-depth control with centralized management of your fields, their value ranges, validation and mapping for import/export data exchange.

Easy ICD-10 Code Selection

Elite's multi-select field groups many options into categories that can be edited in the Dataset Manager. Crews can more accurately document with a drill-down method, eliminating "close picks" for better billing.

Faster, Easier Data Entry

Elite is optimized for data entry in the field with tabs easily accessible by thumb from the edge of the screen. The "six pack" feature simplifies selection when six or fewer options are available, and type-ahead search gets providers through forms faster. Preset Values reduce many data points in common scenarios such as a cancelled call to just a couple clicks.

Consistent Experience

One solution works on Android, Apple or Windows devices for a consistent user experience and IT flexibility.

ELITE™ FOR EMS

Data Exports and Exchange

Enjoy multiple options for sharing and exporting your EMS data. An Incident List is included to select multiple records for bulk exports. Choose the ability to Auto-Post data to a NEMSIS v3 web service with easy set up and adjustable criteria or Auto-Exporter for secure FTP.

Barcode Parsing

The most flexible scanner in the industry. Reduce manual re-typing errors and save time at any facility by scanning codes and automating the conversion of data to align with organization data requirements and workflows.

Dynamic Power Tools™ and Situation Tools™

To make short work of repetitive or complex documentation, Dynamic Power Tools and Situation Tools simplify data entry - often to as little as a tap of a button. Based on the provider's initial impression and course of treatment, these configurable tools can be selected for a scenario, such as cardiac arrest, and display common medications or procedures that might be documented.

Offline Documentation

Elite is a cloud-based system that works anywhere with an internet connection. With optional ImageTrend Elite Field™, documentation can be completed without an internet connection. In a remote area or when infrastructure has been compromised, medics can start and complete documentation of an encounter offline and submit the report when a connection is restored. An encrypted database on the local device keeps the data secure from unauthorized access.

The Complete Picture

Connected data opens the door to new possibilities in integrated healthcare. With ImageTrend's Open Platform, encounters can be sent to hospitals or shared through ImageTrend Health Information Hub™ (HIH) with other agencies, regardless of which ePCR vendor they use*. ImageTrend's solutions leverage powerful software to analyze, document, alert and report on data - making patient-centric care a reality.

*Requires each endpoint to be certified NEMSIS version 3 compliant. Special data sharing agreements required - see ImageTrend Account Executive for details.
